Re: Analytical Results for MW-23 Samples
South Cavalcade Site

Dear Ms. Craig:

I have enclosed the analytical results from our split of the MW-23 sample. The results show no detectable organics nor any metals above background concentrations. These results agree with the results from your split.

I agree with you that well MW-23 defines the eastern boundary of contamination within the upper intermediate aquifer. Therefore, I do not require another sample from this well.

Sincerely yours,

James F. Pendergast, P.E.
Remedial Project Manager
